Overview

Query Augur is a person-finding database that can be accessed by the public and public service workers. With the ability to search individuals up by many different parameters, Query Augur aims to provide critical information about people. End users will be able to search for anybody they want—for example, the ability to search your senator by name to see past infringements. Query Augur aims to make the most out of the information age and allow regular people to be able to see people's records they might want to have hidden.

Scope

Query Augur will be designed only to be a database lookup system. It will have its range and limitations. Query Augur will be accessible to anyone who needs it. It will not be used as a means to search up people for certain situations such as but not limited to employment, credit checks, insurance, tenant screening, and more within the **fair credit reporting act**. Query Augur will be able to search POI with parameters such as first name, last name, city, height, and much more. Query Augur will not give out compromising information such as an address, emails, SSN, and more. Certain information might be able to be parsed if the proper level of authority is requesting it. As for now, this website will only be limited to the United States with support for other countries a pressing priority after launch.
